DEPARTMENT OF TRANSPORTATION

Office of the Secretary of Transportation (OST), Federal Highway Administration (FHWA), and Urban Mass Transportation Administration (UMTA)

NATIONAL RIDESHARING DEMONSTRATION PROGRAM

Solicitation of Interest

LEAD AGENCY: Federal Highway Administration, DOT.

ACTION: Notice.

SUMMARY: The Federal Highway Administration in conjunction with the Office of the Secretary and the Urban Mass Transportation Administration issues this information notice for any parties that may be interested in participating in a ridesharing demonstration program. The program will build upon the information base derived from other ridesharing projects funded by UMTA and FHWA and will further test innovative approaches. Knowledge gained through this effort will be made available to State and local governments and other agencies to improve the general effectiveness of ridesharing programs.

FOR FURTHER INFORMATION CONTACT:

Barbara Reichart, Chief, Ridesharing Branch, Office of Highway Planning, 202-426 0210; or Edward Mullaney, Attorney, Office of Chief Counsel, 202-426-0825.

INTRODUCTION

The United States consumes 7.37 million barrels of motor gasoline each day. Ridesharing, especially for the journey to and from work, is one effective way to conserve gasoline.

Recognition of ridesharing as an energy conservation measure dates back to World War II and today over 15 million Americans, about 21 percent of all who commute to work by vehicle, use some form of pooling as their principal travel mode. Over 70 percent of all work trips occur in metropolitan areas where congestion and environmental factors may make automobile operation especially inefficient and undesirable.

The energy savings at current pooling levels amount to approximately 31/2 billion gallons of gasoline each year. Part of this savings can be attributed to the ridesharing programs developed by Federal, State, and local governments in response to the 1974 Emergency Highway Energy Conservation Act, as amended. An evaluation of a selection of ridesharing demonstration programs using Federal-aid highway and UMTA funds found that

involve more than promotion campaigns and pooler-matching services. Strong involvement by employers, neighborhood associations, or business communities seems to be a requisite for success, as are targeted matching and promotion efforts and an effective combination of incentives.

The U.S. Department of Transportation is interested in ascertaining the most effective ways to increase ridesharing, particularly in metropolitan areas and, through its authority to use funds available to the Department and its modal agencies for research purposes, has established a Ridesharing Demonstration Program. It will build on the information developed to date in related ongoing demonstrations in the UMTA Service and Methods Demonstration Program (SMD). The objective of this 2-year demonstration program is to gain broader application of the positive ridesharing techniques developed by previous FHWA, UMTA, or independent efforts, and to implement and evaluate different combinations of techniques and innovative approaches. Innovative approaches may include, but should not be limited to, such activities as preferential parking programs, priority high occupancy vehicle (HOV) facilities, brokering of ridesharing services, subscription commuter buspools, variable work hour programs, and pricing of facilities so as to encourage ridesharing.

It is anticipated that the 2-year program will fund up to 10 demonstration projects, representative of various geographic areas and population sizes (e.g., small areas (100,000), midsize (150,000), and large areas areas (+1,000,000)). Preference will be given to areas with critical mobile source pollution problems, as identified on the Environmental Protection Agency list of nonattainment areas.

ELIGIBLE PARTICIPANT

Any public agency with authority to administer ridesharing projects involving the expenditure of Federal-aid highway funds and/or Urban Mass Transportation transit assistance funds is invited to express its interest in the program.

FINANCING AND ELIGIBLE EXPENDITURES

The program will provide a financial incentive to State and local agencies to explore comprehensive approaches or new techniques to increase the percentage of ridesharing among local commuters. Project sponsors will be required to commit Federal-aid transportation funds (apportioned Federalaid Urban, Primary, and Secondary System funds or apportioned UMTA Section 5 funds) to the proposed project. For every \$2 (i.e., a combination of Federal-aid funds and the required

ested party to the project, \$1 in speci-Federal demonstration funds will b added. The special Federal demonstr tion funds are auticipated not exceed \$250,000 per project, dependir upon urban area population size a: demonstration potential.

All project-related activities eligib for Federal-aid funding under the Fe eral-aid carpool and vanpool progra are eligible expenses under the demo stration program. It is anticipated th. the project sponsor shall use its comitted Federal-aid funds for the project items normally eligible une existing funding categories and that significant portion of the demonsttion funds being requested will be use in the development of a compreher sive ridesharing program, includin marketing and appropriate incentive and project monitoring and data colection activities.

EVALUATION

The evaluation of demonstration projects will be a cooperative and reordinated effort involving the U.S. I ** partment of Transportation and th interested parties. The Transportatio. Systems Center (TSC), a research and development organization within the U.S. Department of Transportation will have responsibility for the evaluation, including the planning and tech nical direction of individual demon stration evaluations and comparative studies based on findings from the in dividual evaluations. The evaluation approach used will be similar to tha now used by the SMD program; date collection will be performed by th party in accordance with an evaluation plan prepared by TSC and adapted it consultation with parties to meet the needs of individual projects. The interested parties should prepare a data collection budget based upon their perception of the effort required. This will be modified during project devel opment based upon available evalua tion resources, the scope of the indi vidual project, and the needs of the party and the U.S. Department o Transportation.

SELECTION CRITERIA

The following criteria, not necessar ily in order of importance, will be use to determine which of the interester parties will be invited to participate i the program:

(a) Innovative features regardin marketing, incentives, financing, resa lations, insurance, matching, manage ment, and other aspects that have the potential to increase the level of ride sharing activity nationally as well a locally.

(b) Extent and effectiveness of prev ous and current ridesharing activitie

Approved For Release 2000/09/14 : CHATEDP85-00988R000100110064-0

coverage and public needs met.

(c) Past and projected commitment of financial resources, particularly Federal-aid Urban and/or Primary System funds, to implement ridesharing programs and incentives.

(d) Commitment of personnel from local agencies such as ridesharing offices, traffic and planning departments, transit operators, and employers, to participate in the implementation of a comprehensive ridesharing program.

(e) Degree of management capability to develop and adequately evaluate a comprehensive ridesharing program.

(f) Level of anticipated increase in number of ridesharers per dollar of public funds spent.

(g) Endorsement and willingness of State and local officials to cooperate in the development and implementation of a comprehensive ridesharing program.

(h) Degree of community involvement and support from public officials, public and private bus operators, employers and other relevant groups as evidenced by letters of endorse-

To the extent possible, projects will be selected to meet the geographic, population sizes, and air quality features discussed above.

CONTENTS OF LETTERS OF INTEREST

Letters of interest should not exceed 10 pages and should include, in the following order:

(a) A concise statement of the progosed project goals and objectives. Goals should be quantified to the extent possible. For large urban areas the project may encompass only a segment of the urban area.

(b) A narrative description of the aclivities to be carried out during the project. The narrative should state now the project will build on previous activities, what approaches will be used to match potential poolers, incenlives to be developed for pooling, inolvement of employers or groups of employers or employees, involvement of public and private bus operators in forming buspools, and identification of legal, regulatory, or institutional barciers to the formation of carpools, vanmools, and buspools.

(c) A statement of previous and current ride-sharing activities, specifically identifying annual financial level of effort and funding sources, size of staff, number of requested matches, number of carpools/vanpools formed, evaluation results, marketing and promotional activities, and legal or regulatory actions taken to encourage ridesharing.

(d) Summary of proposed project costs and breakdown of funding sources. Each budget line item should

including comprehensiveness of area be justified in a short narrative following the summary. The budget sheet should clearly differentiate between the funds (Federal and local) to be committed by the party and the special Federal demonstration funds being requested. A sample budget format follows below identifying categories to be used.

(e) A short description of the area and a map (folded to 8½" x 11" size) should be included. To the extent possible, major employment concentrations should be identified on the map by type and number of employees.

(f) A copy of the following information should be included:

(1) A resolution by the governing body of the party authorizing submittal of the letter of interest.

(2) Identification of the urbanized area and endorsement of the proposed project by the metropolitan planning organization (MPO).

(3) Where the MPO is not the areawide A-95 clearinghouse agency, a record of A-95 review.

(g) Letters of endorsement from public and private organizations should be included as an attachment and will not be considered part of the letter of interest. No other attachments should be included.

INTERESTED PARTIES RESPONSIBILITIES

Nine copies of the letter of interest should be sent to the State transportation agency if the interested party is other than the State transportation agency, with a certification that the proposed project, if preliminarily selected for funding will be included in the Transportation Improvement Program for the local area and the State 105 program. Eight copies of all letters of interest should be forwarded by the State transportation agency to the Federal Highway Administration division office. If selected for funding consideration, the project sponsor must plan, implement, collect data, and document project activities under agreement with the State transportation agency and the Federal Highway Administration, and participate in ridesnaring workshops with other project sponsors and agency representatives.

TIME SCHEDULE

Letters of interest should be submitted to the State transportation agency no later than May 14, 1979. They will then be forwarded through Federal Highway Administration division of-fices in each State to the Department of Transportation in Washington, D.C.

Preliminary selection of the projects from the letters of interest will be made by FHWA, UMTA, and OST. The announcement of preliminarily selected demonstration projects will be made as soon thereafter as possible.

Issued on March 6, 1979.

RICHARD S. PAGE. Urban Mass Transportation Administrator.

KARL S. BOWERS. Federal Highway Administrator.

> JOHN J. FEARNSIDES. Deputy Under Secretary.

APPENDIX

As the following bibliography illustrates, a substantial amount of work has been done in various aspects of ridesharing. The publications listed may provide information to those interested in participating in the cities demonstration program. The reports are available through Transportation System Center (TSC), National Technical Information Service (NTIS), Government Printing Office, the Federal Highway Administration or other source, as identified for each entry,
